01 Why QR Codes Are Having a Moment

QR codes were written off after a lukewarm first decade. Then smartphones made native scanning standard, COVID made contactless necessary, and marketers discovered something powerful: a QR code is not just a link — it's the top of a conversion funnel that lives in the physical world.

The shift that matters most: **QR codes no longer send people to a homepage.** Smart marketers now route scans to purpose-built micro-flows — a 3-screen lead capture, a donation widget, an event RSVP — that are impossible to get lost in.

■ The best QR campaigns feel like magic: scan → land → act. Every extra click, form field, or page load you remove roughly **doubles** completion rates.

The 5 Most Powerful QR Marketing Use

02 Cases

■ Lead Capture

Print → scan → email collected in under 30 seconds. Works on flyers, booth banners, direct mail, trade-show badges, and product packaging. The QR replaces a clipboard form and syncs leads directly to your CRM.

♥■ Donation & Giving

Nonprofits, churches, and school fundraisers can accept one-time or recurring donations without a POS terminal. Scan the QR on a bulletin or event screen and complete the gift in under 60 seconds.

■■ Event RSVP & Check-in

Replace paper sign-in sheets with a QR on invitations or signage. Attendees scan to confirm attendance and optionally opt into your email list. You get a real-time headcount and a warm list.

■ Product Activation

Unboxing QR flows walk new customers through setup, surface warranty registration, and capture their email for onboarding — before they've put the box down.

■ Feedback & Reviews

Table tents, receipts, and follow-up cards drive post-experience reviews. A QR that launches a 3-question survey beats a link in a follow-up email because intent is highest in the moment.

03 Anatomy of a High-Converting QR Flow

Every top-performing QR campaign follows the same four-screen structure. Deviate from it and drop-off spikes at each extra step.

1

Hook Screen

One headline. One image. One micro-promise. Answers the implicit question *'Is this worth 30 more seconds of my time?'* No navigation, no distractions. Match the visual language of whatever they scanned — same color, same copy tone.

2

Single-Action Ask

One field (email or phone) *or* one decision (donate \$10 / \$25 / custom). The moment you add a second required field, completion rates drop 30–40%. Collect only what you'll use in the next 7 days.

3

Instant Gratification

Deliver the promised value immediately: show the discount code, download the guide, confirm the RSVP. This step trains future behaviour — people remember flows that felt instantly rewarding.

4

The 'One More Thing'

Optional upsell, share prompt, or secondary CTA — placed *after* value delivery. 'Share with a friend for 20% off' converts here because goodwill is at its peak.

■ **GiveLive tip:** All four screens above are a single GiveLive Flow. Drag nodes into place, connect with arrows, publish. Your QR code generates automatically — no developer required.

04 7 Templates That Actually Work

Each template is available in GiveLive. Duplicate, swap your branding, publish. Battle-tested across hundreds of real campaigns.

■ Event Lead Capture

Collect emails at trade shows & events

- Hook: 'Grab your free resource'
- Single email field
- Instant PDF / discount delivery
- Optional: follow on LinkedIn

♥■ Nonprofit Donation Flow

3-tap giving for any org size

- Impact statement header
- Preset amounts (\$10 / \$25 / \$50)
- Stripe-powered checkout
- Thank-you screen + receipt email

■ Workshop RSVP

Fill seats without a ticketing platform

- Event details on hook screen
- Name + email RSVP form
- Calendar-add link on confirmation
- Reminder email automation

■ Product Activation

Turn packaging into an onboarding funnel

- QR on insert card
- Welcome video or setup guide
- Warranty / feedback form
- Upsell to accessories or membership

■ Post-Visit Review

Capture feedback while intent is hot

- 'How was your experience?' hook
- 1–5 star tap rating
- Google/Yelp redirect for 4–5 stars
- Internal ticket for 1–3 stars

■ School Fundraiser

Parent-friendly giving with zero friction

- Student / class name on hook
- Goal progress bar
- Custom donation amounts
- Shareable link for parents

■ Newsletter Lead Magnet

Turn any printed asset into an email list

- 'Get the weekly playbook' hook
- Single email field
- Instant welcome email
- Drip sequence kicks off immediately

Setting Up Your First Flow in 10 05 Minutes

Open **app.givelive.app** in a second tab and follow along.

1

Choose a template

Click **New Flow** → browse the gallery → **Duplicate** the template that matches your use case. Starting from scratch rarely beats a proven template.

2

Swap your branding

Upload your logo, set your brand color (one hex value), replace the hero image. Matching the visual language of your physical collateral improves scan-to-completion by ~20%.

3

Edit the copy

Every screen has a headline and body. Formula: *headline = the one thing they get;* *body = the one reason to act now.* Delete any sentence that doesn't earn its place.

4

Connect your destination

Wire the email capture node to Mailchimp, HubSpot, or Kit — or let GiveLive store responses for CSV export. Donation flows connect to Stripe in one click.

5

Publish and download your QR

Hit **Publish**. GiveLive generates a QR code and a short link. Download as SVG (for print) or PNG (for digital). Drop it on your flyer, banner, slide deck, or email signature.

■ **Pro move:** After publishing, scan your own QR and complete the flow as a real user. You'll spot friction instantly. Fix anything that makes you hesitate.

How to Measure QR Campaign

06 Success

Most QR campaigns fail silently because nobody defined success before launch. These are the four metrics that matter — and how to read them in GiveLive Analytics.

Scan Rate	Scans ÷ impressions	2–5% print 8–15% event/booth	Fix placement, size, or surrounding CTA copy
Completion Rate	Completed actions ÷ scans	35–60% for a clean single-screen flow	Remove a form field, shorten copy, improve hook headline
Cost per Lead	Total spend ÷ completed actions	QR CPL typically 60–80% lower than paid digital	A/B test the destination flow before scaling print
Attribution Source	UTM params per asset (flyer / banner / packaging)	Varies — set a baseline in week 1	Tag every asset: utm_source=flyer&utm_campaign=name

Advanced Tactics: Email Capture,

07 Referrals & Nurture

Email Capture at Scale

A QR lead capture flow is only as valuable as what happens next. The moment someone submits their email, start an automated welcome sequence — don't wait until your next newsletter blast.

The **3-email sequence** that converts best for QR-captured leads:

Email 1 (immediate): Deliver exactly what you promised on the flow. No upsell. No fluff. The guide, the code, the RSVP confirmation. Subject = the headline from your hook screen.

Email 2 (Day 3): One genuinely useful tip. Reply-bait question at the end: 'What's the #1 thing you're trying to solve?' — trains sender reputation and surfaces real pain points.

Email 3 (Day 7): Social proof + soft CTA. One success story from someone like them, then an invitation to explore the paid product or book a call. This is where revenue begins.

Referral Loops from QR Campaigns

The most viral QR campaigns build sharing into the confirmation screen. After a successful action: 'Your friend gets [X] when you share this link.' Pre-fill the social copy. A single share from a satisfied scanner produces 3–8 organic new scans at zero incremental cost.

■ **GiveLive referral tip:** Every published flow gets a unique short URL. Use the **Share Prompt** node to surface it post-completion with pre-written X, LinkedIn, and WhatsApp copy.

Watermark Your Way to Free Traffic

GiveLive adds a small 'Built with GiveLive' badge to flows on free accounts. That badge is a live referral link. When your QR flow performs well — at events, on packaging, in venues — others see it and scan it, driving organic signups. Your marketing team working while you sleep.

08 Quick-Start Checklist

Run through this before every QR campaign launch.

Before You Design

- Defined the one action I want people to take
- Chosen the right template for this use case
- Know exactly where the QR will be placed
- Estimated daily impressions for tracking
- Decided what value I'm offering in exchange

While Building

- Logo and brand color applied
- Hook headline is specific, not generic
- Form has ≤ 2 fields (ideally just email)
- Instant gratification screen delivers value
- Connected to email provider or Stripe
- UTM parameters set (source + campaign)
- Tested on my own phone
- Looks good on Android AND iPhone

At Launch

- QR downloaded as SVG for print
- QR is minimum 2 cm $\times$ 2 cm
- High-contrast background behind QR
- Clear call to action near the QR
- Short URL also printed (for non-QR users)
- Analytics baseline noted (0 scans, 0 leads)

After 7 Days

- Reviewed scan rate vs. impressions estimate
- Checked completion rate (target: 35%+)
- Replied to 'what's working?' email replies
- Email sequence sent on schedule
- Identified 1 thing to A/B test next

Ready to launch your first QR flow?

GiveLive gives you templates, analytics, email integrations, and Stripe payments in one visual builder. No code. No per-scan fees.
